

Boosted Board Lock

- Install Guide -

Copyright © 2019 Skate Kastle LLC - All Rights Reserved

Thank you for your purchase from Skate Kastle!

We hope you enjoy your new Boosted Board Lock! It will allow you to take your board to new places and lock it up whenever you need. Please use caution and care when installing and using the lock with your board. Always ride safe and wear a helmet!

What's in the box with your Boosted Board Lock?

- Boosted Board Lock
 - Lock, shackle & carrying strap
- Security Plate
- 2 Rubber Risers
- 4 Security Bolts w/washers
- 1 Security Bolt Driver Key
- 2 Numbered Keys (don't forgot to register your keys)

Got the Battery Blocker as well! Then you should also have:

- Battery Blocker
 - Blocker Plate, Locking Pin & Cylinder Lock
- 2 Keys for Cylinder Lock
- 3 Battery Mounting Bolts

Please ride all electric skateboards with care as they can cause serious injury and death. Install all modifications at your own risk and understanding that no board is completely safe. Always wear a helmet and ride safe!

Getting your Boosted Board Lock installed!

- **Step One** – Take the front truck off your board by removing the four hardware bolts attaching the front trucks to the board - In between the trucks and board there is a plastic riser that will stay on the board, you'll want it there later - You can take the hardware bolts out and make sure to keep the nuts handy as you'll be re-using those.
- **Step Two** – With the front truck off, place the security plate on top of the plastic riser. It should fit snugly on it and goes in between the plastic riser and the front truck baseplate - Then take the rubber damper and place it between the security plate and the truck baseplate - Thread in the new security hardware bolts and fasten them with the nuts. Now you're good to go!

(Layers from the top: Boosted Board, plastic riser, security plate, rubber damper, truck baseplate)

To install Battery Blocker: Remove the three Allen bolts holding the battery plate. Replace with the blocker plate, replace with the provided Allen bolts and secure with locking pin and cylinder lock.

If you purchased a Lock Box with bash guards, the security plate will be built into your front bash guard. Remove the front and rear plastic risers, then place the rubber pad in between the bash guard plate and truck baseplate.

Now you're ready to use the lock, what next?

- **Using the lock** - Slide the lock in between the battery and front truck. Seat it flat before engaging the shackle. Once seated, loop in the L-end of the shackle and push the locking end straight down till it seats flat. You may need to give it a good push to make sure it's engaged. The special key system will not let the key out if not locked so if the key isn't popping out it may not be seated all the way down. Once locked pull on the shackle to confirm positive engagement and ensure shackle is seated.
- Use caution and care when securing your Boosted Board outside as you would with any bicycle worth thousands of dollars. Lock in a public well-lit place to a secure bike rack or post that cannot be removed or unbolted. We recommend not leaving your board outside for a duration greater than 2-3 hours and to not lock it up overnight. Skate Kastle LLC is not responsible for any lost or stolen boards Ensure all bolts are fastened properly after installation and periodically during use. Ride safely, always wear a helmet and don't forget to look both ways before crossing the street!

Please reach out with any installation questions. Feel free to give us a shout at 312-560-3353 or drop us an email at customer.support@skatekastle.com and we'll get back to you as soon as possible! Thanks for your purchase and ride safe!
