Financial Microscope

Predictive financial insight for investment and business decisions

A specialist provider on the Bymark platform. Financial Microscope brings AI-driven company analysis to Bymark's market relationship including UK Equity Managers, PE and Credit firms, companies and other market participants. Bymark provides the introduction and coordinates the relationship; Financial Microscope delivers the specialist analytics.

What Financial Microscope does

It turns company profit and loss and balance sheet data into a forward-looking assessment of financial health. Its model combines company signals with industry and macroeconomic context to assess likely performance over the next 12–24 months and highlight the drivers of risk or improvement.

How it supports your decisions

Company screening and due diligence Company Overview Reports combine financial health, default risk, peer comparisons and economic context to focus further investigation.

Performance prediction and evaluation The Sustainability of Performance (SUP) score assesses the likely trajectory and identifies financial drivers requiring attention.

Scenario testing Simulate changes to costs, growth or business structure to assess their potential effect on future financial sustainability.

Portfolio monitoring Portfolio Reports compare businesses, surface early warnings and help prioritise deeper reviews and management action.
