Nomerra

AI for private market operations

A specialist provider on the Bymark platform. Nomerra brings operational AI to Bymark's global network of private markets firms, asset managers and asset servicers. Bymark provides the introduction and coordinates the relationship; Nomerra delivers the specialist technology.

What Nomerra does

Nomerra turns operating procedures into AI agents that carry out work across existing email, portals, banking, file storage and fund accounting systems. Teams can start with one process and expand, retaining review and approval controls.

Works where you do

Just like a member of your team, Nomerra's AI agents work end-to-end across your existing systems, from inboxes and bank feeds to portals, file storage and your ERP.

Follows your procedures

Link your standard operating procedures and describe the work in natural language. Nomerra provides the models, context, and execution harness needed to run AI agents at scale.

Always under your control

Track every session and approve deliverables on your own terms, with clear visibility into what was done, when, and by whom. Full audit trail on every action.

Where it supports operations

Fund accounting and treasury Match bank transactions to notices and ledgers, flag reconciliation breaks, prepare journal entries and set up payments for four eyes review and release.

Documents and reporting Triage emails, retrieve portal documents, classify and file records, and assemble reports from documents and core systems.

Investor and entity administration Check onboarding documents for completeness, prepare investor records and validate master data changes against approval rules.

Who it helps

For asset managers globally, Nomerra supports new products and structures with more operational capacity. For asset servicers, it supports additional mandates and broader services. Role based permissions and action logs keep work visible and accountable.
