

In protest to the LEAPS project (FERC Docket Number: P-14227-003)

Forest Lake and Communities Coalition is a non-profit (501c3) organization representing communities threatened by the proposed Lake Elsinore Advanced Pumped Storage project (LEAPS).

We oppose and protest LEAPS because:

- 1) LEAPS will convert 32 miles of forest into a private, for-profit transmission line that will interfere with firefighting aircraft and ground crews.
- 2) LEAPS will permanently destroy Decker Canyon's woodlands and chaparral for its upper reservoir.
- 3) LEAPS will be built on a geological fault.
- 4) LEAPS construction and daily operation will cause permanent damage to Southern California's only natural lake.
- 5) Public agencies, such as the California Independent System Operators and Southern California Edison say the project is not needed.
- 6) Newer, more environmentally friendly energy storage technologies will render LEAPS obsolete before its 50-year life span.

We, the undersigned, request that the Federal Energy Commission deny a license to construct all parts of the LEAPS project:
