

# Let's Shellebrate World Turtle Day!

Join us in celebrating World Turtle Day on 23rd May

World Turtle Day aims to spread awareness about the importance of turtles and the need to protect them and their habitats.

To be a part of this day, we have created four engaging lesson plans for your school to choose from and implement during the week of World Turtle Day. These lesson plans are designed for Stage 3 students and cover important topics related to freshwater turtle ecology, threats and conservation. Each lesson also includes background information and hands-on activities.

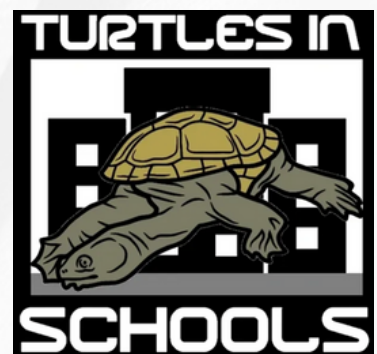

Choose from the following lessons: (click on bold text)

**Turtle Morphology**: Classroom based lesson about freshwater turtle morphology, life cycle and habitat use.

**Wetland Habitats**: Wetland based lesson where students visit their local wetland, identify turtle habitats and assess the wetlands health.

**Turtle Threats**: Classroom based lesson about the threats to Australian freshwater turtle species.

**National Nest Predation Survey**: Wetland based activity where students create and monitor nest predation rates.

To view all the lessons, click on the logo above. You can also click on the link below or copy & paste it into your URL.
