

SYNAPP

DEVSECOPS – SOFTWARE ENGINEER – LEVEL 3

We are seeking a Software Engineer (DevSecOps) – Level 3 to join our team and contribute to cutting-edge defense and space technology projects. In this role, you will integrate security best practices into the development lifecycle, automate CI/CD pipelines, and support mission-critical systems. Ideal candidates have experience with cloud-native environments, containerization, infrastructure as code, and secure software development.

SYNAPP is a small, SDVOSB cybersecurity company that provides specialized support to USSF, USAF, NASA, and other DoD missions. Our team is dedicated to delivering innovative security solutions that enhance national defense and space operations.

Qualifications You Must Have:

- Bachelor's of Science degree in Computer Science, Software Engineering, or another related discipline, with typically **6 or more years** of relevant experience
- Higher education may substitute for relevant experience
- Understanding of Computer-Aided Engineering tools
- Practical knowledge of engineering principles and practices
- Experience working in multi-disciplinary teams
- **The ability to obtain and maintain a Top Secret U.S. Security Clearance is required**

Qualifications We Prefer:

- Understanding of industry-standard software languages such as C, C#, C++, HTML, Java, Python, and Bash
- Experience with software tools for requirements tracking, code reviews, static analysis, library and artifact repository, and automated builds
- Knowledge of software development methodologies such as Agile/Scrum, Waterfall, and Spiral
- Experienced with data structures
- Experience integrating software components within mission systems while adhering to industry standards and protocols
- Proficiency in developing and integrating software components compliant with Open Missions Systems (OMS) standards
- **Active Top Secret Clearance**
