

SAFE

The FIREWHEEL® is one of the few safe projectile-firing toys on the market, and it complies with Australian Toy Safety Standard AS1647.

It has been designed so that it is extremely difficult to launch anything else with the rubber bands, without mutilating the product.

Rubber bands are made from a soft, shock-absorbing material (rubber), and distribute the energy over a significant area on impact. Because of this they are very unlikely to cause injury, even if struck in the eye.

The above standard requires a minimum factor of safety of 8.0 against the risk of permanent eye injury.

Of course, we do not recommend that the rubber bands be intentionally fired at other persons.
