

## Fact Sheet

# Compounded GLP-1 Semaglutide + Cyanocobalamin Injection

Semaglutide is the active ingredient found in Ozempic® and Wegovy®. PharmaLabs compounds Semaglutide in combination with Cyanocobalamin (B12) in a ready-to-use vial. Each batch compounded by PharmaLabs undergoes extensive quality checks and, in many cases, exceeds quality, stability, and strength standards set by the state compounding Pharmacy Boards for sterile product manufacturing.

Our commitment to excellence is demonstrated by our rigorous quality control, state-of-the-art manufacturing processes, and stringent adherence to licensing and accreditation standards. We conduct stability studies on all new products, validating their purity, strength, and stability through their expiration date before their release.

Here is a bit more about the processes we have in place to produce our sterile compounded products.

### OUR SEMAGLUTIDE SOURCE

#### Quality at Its Core

When it comes to sourcing semaglutide, we don't compromise. We only partner with FDA-registered wholesalers and manufacturers, ensuring the highest quality ingredients for our sterile products. Our robust vetting strategy is your assurance of our unwavering dedication to quality. We only source the base molecule for semaglutide, which is the first step in ensuring that our Semaglutide + Cyanocobalamin injection meets the highest quality mark.

### PHARMALABS

#### Licensing and Accreditations

At PharmaLabs, we take our responsibility to deliver safe and effective pharmaceuticals very seriously. We hold the PCAB accreditation for sterile compounding - the gold standard in our industry. Achieving this accreditation is already above and beyond the minimum standards set by the United States Pharmacopeia, but we don't stop there.

Moreover, we're also inspected by the Boards of Pharmacy in the 43 states where we hold licenses. For many of the States, PharmaLabs is required to provide compounding data outlining products dispensed, production logs prepared, and quality control results validating the products we distribute.

Finally, every other year, we undergo a Verified Pharmacy Program (VPP) inspection through the National Association of Boards of Pharmacy. Our compliance with these regulatory requirements is not just an obligation; it's our commitment to you and the communities we serve.

## STABILITY AND STERILITY

### Our Promise, Delivered

Our process includes rigorous testing at multiple stages of production to check the stability of semaglutide. This helps to ensure that the medication retains its effectiveness from the time it's manufactured until the end of its shelf life.

Sterility is also a critical aspect of our manufacturing process. We have robust procedures in place to prevent contamination. Every batch of semaglutide we produce must be tested prior to release to ensure it's free from any microbial contamination, providing a safe product for our customers.

Furthermore, we employ temperature-sensing technology to ensure that our products never exceed their storage requirements during shipment.

## ABOUT PHARMALABS

### Your Partner in Quality & Trust

PharmaLabs is an industry-leading 503A compounding pharmaceutical company that prides itself on our solid reputation for delivering high-quality products and services.

We're known as one of the leading producers of compounded sterile intracavernosal injection medications, and we've been compounding sterile medications in the men's health space for over 13 years. We're now taking what we learned to expand into Wellness and Longevity treatment support.

We believe that this level of commitment and transparency is crucial to building trust with our customers, healthcare providers, and the wider community.
