Protect Baltic

Take-home messages from workshops

Baltic Stakeholder Conference 2024 Hanaholmen, Espoo, Finland

Management workshop

Stakeholders see in person meetings as favourite tool for MPA management planning process; early involvement key! Varying priorities in ME assessment by different stakeholder groups

Clarity of MPA targets and management measures vs improvement in status of conservation feature

Ecosystem services workshop

Ecosystem services need to advance to policy level

Flipping the focus

Diversity of values and valuation methods included in Ecosystem Services evaluation

Spatial modelling workshop

Relevance of data availability and harmonisation

Importance of Confidence assessments and alternative mapping approaches Further outreach to stakeholders on data usage and modelling progress (e.g. through newsletters and webinars)

Legal frameworks workshop

Promote synergies between and integration of legal frameworks Overcome reluctance to apply mediation and making trade-offs between interests

Sectoral compartmentalization in law, policy, and organization must be bridged

MPA portal workshop

Should not add

to workload

Map functionality

Simple, but informative

Restoration workshop

Thought out and data driven priorization of actions

Different actors need to be involved for effective implementation

Clear aims and monitoring of restoration actions

Governance workshop

Strengths/weaknesses

- + Cooperation!
- Prioritising economic interests
- Fragmented governance and legal frameworks

What is governance

decision-making

The processes,
structures, principles
and enablers guiding

Solutions

Engaging people at multiple scales from local to global

Transformative change of the mindset

Monitoring workshop

Monitoring is very important tool for managing the MPAs

MPA monitoring programmes should be alligned with other monitoring happening in marine environment

It is very important to guarantee data reliabilty, accessibility, comparability.

Coherence workshop

Ecological connectivity is central for the development of the MPA network

Baltic-wide assessment of ecological coherence needed for guiding the national work on MPAs The 10% strict protection objective is central for the future work on MPAs in the

MPA Europe workshop

Stakeholder engagement helpful for bridging MPA and MSP communities

think about business and public perception of protecting biodiversity versus decarbonisation how can our methodology integrate with national datasets and projects and PROTECT BALTIC
