

PROTECT BALTIC & MSP

How the project helps planners

PROTECT BALTIC helps answer:

- **Where** are the key ecosystems, how are they distributed, and how do species move between them?
- **Which** human pressures affect them—and **how** do those impacts occur?
- **What** should be protected—and how much?

It helps to:

- Identify areas of **high ecological value**.
- Analyze **cumulative impacts** of human activities.
- Evaluate **trade-offs** between uses.
- Support **ecosystem-based planning**.

Linking biodiversity, ecosystem services and human pressures for better sea planning
