## **IMPORTANT NOTE:**

Please follow the instructions on this sheet in order for the Martin bushing to perform satisfactorily.

3535 to 6050 7060 to 10085

**INSTALLATION** 

- 1. Clean all oil, dirt, and paint from shaft, bushing bore, outside of bushing and component (sprocket, sheave...etc.) bore.
- 2. Insert bushing into component. Match the hole pattern, not the threaded holes (each hole will be threaded on one side only.)
- 3. Thread set or cap screws into those half threaded holes indicated by  $\bigcirc$  on above diagram. Mount assembly on shaft.
- 4. Alternately torque set or cap screws\* to recommended torque setting in chart below.
- 5. On 3535 and larger bushings use a block, sleeve or drift and hammer large end of bushing (do not hammer bushing directly).
- 6. Repeat steps 4 and 5 until torque wrench reading, after hammering, is the same as before hammering.
- 7. Fill all unoccupied holes with grease.
