Introduction

The following grading scale is used to describe the cosmetic and functional condition of professionally upgraded SaveryTech computers. Every system undergoes extensive testing and upgrading to ensure it performs at or above factory specifications, regardless of grade.

Battery health percentages are based on the battery's Full Charge Capacity compared to its original Design Capacity as reported by industry-standard diagnostic tools.

Battery Health Information

Battery health percentages are based on the battery's remaining capacity compared to when it was new. For example, if a new battery provides approximately 6 hours of typical use, a battery at 75% health would be expected to provide approximately 4.5 hours of use, while a battery at 50% health would be expected to provide approximately 3 hours of use.

Actual runtime will vary based on system settings, workload, screen brightness, wireless usage, and battery age. All rechargeable lithium-ion batteries naturally lose capacity over time, and battery health is considered a consumable characteristic rather than a defect.

Understanding A- and B- Ratings

A- and B- rated systems meet the same performance, functionality, testing, and cosmetic standards as their respective A and B grades. The only difference is battery health, which ranges from 30% to 49% of original design capacity.

These systems are often a practical choice for users who primarily operate their laptop while connected to a power adapter, such as in a home office, classroom, workshop, or other fixed-location environment. Customers who frequently travel or require extended battery operation away from a power source may wish to consider a standard A or B rated system instead.

Grade A- and Grade B- systems are sold at a reduced price to reflect the reduced battery capacity present at the time of sale. These batteries are fully functional but are not eligible for battery warranty coverage. Customers may elect to purchase a discounted battery replacement service at any time.

Battery Warranty Information

All batteries included with SaveryTech systems are tested prior to sale and verified to meet the minimum battery health requirements associated with their assigned grade.

Battery health is determined by comparing the battery's Full Charge Capacity to its original Design Capacity using industry-standard diagnostic tools. SaveryTech reserves the right to perform battery calibration and diagnostic testing before determining warranty eligibility.

Standard Battery Grade (50% or Greater Battery Health)

Grade A and Grade B systems include batteries verified at 50% or greater of original design capacity at the time of sale.

These batteries are covered by a six (6) month battery warranty from the original purchase date.

During the warranty period, SaveryTech will provide a replacement battery or equivalent warranty remedy if battery health falls below 20% of original design capacity as verified by industry-standard diagnostic tools and confirmed through SaveryTech diagnostic testing.

Before any battery warranty claim is approved, SaveryTech may perform a remote diagnostic session to verify reported battery health and confirm eligibility for warranty service.

Reduced-Capacity Batteries (30%–49% Battery Health)

Grade A- and Grade B- systems include batteries verified between 30% and 49% of original design capacity at the time of sale.

Because these systems are sold at a discounted price reflecting their reduced battery capacity, battery health and battery capacity are not covered under warranty.

Customers may request battery replacement service at any time for a discounted rate of \$60 plus the cost of the replacement battery. This service includes return shipping or local pickup where applicable.

Grade A: Premium Certified

Normal wear from standard corporate use. May include light scuffs consistent with everyday office handling. The bottom panel may show slightly more noticeable scuffing, and there may be small areas of paint loss from removed asset tags or stickers. Cosmetic wear is mild and consistent with normal use. No defects or irregularities in performance. These systems represent the highest cosmetic tier while maintaining full SaveryTech reliability and power.

Battery Health: Battery capacity is verified at 50% or greater of original design capacity.

Battery Warranty: Six (6) months. Warranty replacement eligibility begins when battery health falls below 20% of original design capacity during the warranty period.

Grade A-: Premium Certified

Meets all Grade A cosmetic and functional standards.

Battery Health: Battery capacity is verified between 30% and 49% of original design capacity.

Battery Warranty: Not included.

Discounted Battery Replacement Service Available: \$60 plus battery cost, including shipping or local pickup where applicable.

Grade B: SnaggleTooth Rescue Tech

Heavier cosmetic wear consistent with extended or heavy office use. May include more noticeable scratches, scuffs, or larger areas of cosmetic blemishing compared to Grade A units. We apply SaveryTech branded stickers wherever appropriate to improve overall appearance. Cosmetic imperfections do not affect functionality. Internally, these machines are fully tested, upgraded, and remain powerful, high-performing systems—only the exterior shows signs of prior use. These units offer exceptional performance at a strong value.

Battery Health: Battery capacity is verified at 50% or greater of original design capacity.

Battery Warranty: Six (6) months. Warranty replacement eligibility begins when battery health falls below 20% of original design capacity during the warranty period.

Grade B-: SnaggleTooth Rescue Tech

Meets all Grade B cosmetic and functional standards.

Battery Health: Battery capacity is verified between 30% and 49% of original design capacity.

Battery Warranty: Not included.

Discounted Battery Replacement Service Available: \$60 plus battery cost, including shipping or local pickup where applicable.

Grade C: Parts or Project Units

Heavy wear and tear or physical blemishes. These may include dents, missing cosmetic panels, or hardware issues such as non-functional components. Typically sold for parts, repair, or educational use. May not include warranty or full refurbishment.

Minimum Battery Requirements

Systems with batteries testing below 30% of original design capacity are generally not sold with those batteries installed. When replacement batteries are available, SaveryTech will install a replacement battery. If a suitable replacement is unavailable, the system may be sold without a battery and clearly identified as such.

Notes

All SaveryTech systems are sanitized, tested, and re-imaged to meet professional standards before sale. Performance is never compromised by cosmetic grade.

Battery health classifications are disclosed as part of the grading system so customers can make informed purchasing decisions.

SaveryTech's battery grading philosophy is designed to maximize the useful life of functional batteries while reducing unnecessary electronic waste.

Grade A- and Grade B- systems receive a discounted purchase price reflecting the reduced battery capacity present at the time of sale.

This grading scale establishes battery classifications and warranty eligibility requirements. All warranty claims remain subject to the terms and conditions contained in the SaveryTech Customer Agreement.
