

SaveryTech Professional Computer Grading Scale

The following grading scale is used to describe the cosmetic and functional condition of professionally upgraded SaveryTech computers. Every system undergoes extensive testing and upgrading to ensure it performs at or above factory specifications, regardless of grade.

Grade A: Premium Certified

Normal wear from standard corporate use. May include light scuffs consistent with everyday office handling. The bottom panel may show slightly more noticeable scuffing, and there may be small areas of paint loss from removed asset tags or stickers. Cosmetic wear is mild and consistent with normal use. No defects or irregularities in performance. These systems represent the highest cosmetic tier while maintaining full SaveryTech reliability and power.

Grade B: SnaggleTooth Rescue Tech

Heavier cosmetic wear consistent with extended or heavy office use. May include more noticeable scratches, scuffs, or larger areas of cosmetic blemishing compared to Grade A units. We apply SaveryTech branded stickers wherever appropriate to improve overall appearance. Cosmetic imperfections do not affect functionality. Internally, these machines are fully tested, upgraded, and remain powerful, high-performing systems—only the exterior shows signs of prior use. These units offer exceptional performance at a strong value.

Grade C: Parts or Project Units

Heavy wear and tear or physical blemishes. These may include dents, missing cosmetic panels, or hardware issues such as non-functional components. Typically sold for parts, repair, or educational use. May not include warranty or full refurbishment.

Note: All SaveryTech systems are sanitized, tested, and re-imaged to meet professional standards before sale. Performance is never compromised by cosmetic grade.
