Making Muscles

Can you make a fist? You could not do this without muscles. You need muscles to make your body move. You have muscles everywhere. There are muscles in your legs. There are even muscles in your tongue!

Remember, your heart is a muscle. It is called an involuntary muscle because it works without help from you. Your stomach muscles are also involuntary. You don't need to tell your stomach to digest food. Other muscles are called voluntary muscles. You must tell these muscles to move. Most voluntary muscles are hooked to bones. When the muscles squeeze, they cause the bone to move. Without your muscles, you would be nothing but a bag of bones!

brain
Directions: Answer these questions about your muscles.

1. What are involuntary muscles? moves with out help

2. What are voluntary muscles? you tell

3. These muscles are usually hooked to bones:
   involuntary muscles
   voluntary muscles   All

4. What causes bones to move? brain
