HAND PROTECTION HANDBOOK

A KLEIN TOOLS COMPANY

TECHNOLOGY, TESTING AND OUR COMPLETE GLOVE LINE-UP

PROFLEX[®]

PROTECTING YOUR MONEY MAKERS SINCE 1983.

For nearly four decades we've been hell bent on protecting workers. Making sure you're able to do the work and do it safely. And no matter how you Google it, Hand Protection or Work Gloves, we have your ten fingers covered. Padding and protection where you need it most. Cut resistance, anti-vibration and waterproof for safety and extended use. And, as always, durability, flexibility and fit come standard.

PROFLEX[®]

PROFLEX® GLOVES: NO EXCUSES

Too hot. Too bulky. No grip. Hey, we get it. But going commando ain't the way, baby. Before you go bare knuckle on the bit, consider 70% of hand injuries happen because gloves aren't worn. The other 30%? Wearing the wrong gloves for the job. Facts*.

ProFlex Gloves have one crazy goal in mind: to get worn. Period. You might even find they help you do the job better. (We can dare to dream, can't we?)

With ProFlex, there's no excuse to go glove-less:

Too hot? Exclusive cut-resistant yarn with moisture-wicking and cooling fibers

Too bulky? True feel and "thread the needle" precision for nimble handling

No grip? Leading-edge dip technologies that outperform the second best by a long shot

And that's just the start. To find the fix for all your glove gripes, just let your fingers do the walkin'...

PROFLEX® COATED GLOVES:

TECHNOLOGY

INNOVATION THE COMPETITION CAN'T TOUCH

GET A HANDLE ON BREAKTHROUGH YARN & DIP TECHNOLOGIES, UNMATCHED GRIP (FOR WET/OILY OR DRY SURFACES) AND A FULL RANGE OF ANSI-LEVEL CUT RESISTANCE.

YARN TECHNOLOGY

13, 15, 18
WHAT IS GAUGE?

Gauge indicates the number of stitching rows per inch. A higher gauge means more flexibility and less bulk. When selecting safety work gloves, look for the best possible balance of dexterity and protection for the job.

TENALUX™ // 13-GAUGE:

MODELS: 7040, 7041, 7141, 7941

The coolest cut protection around.

Cut-resistant yarn with cooling & moisture-wicking fibers.

- ANSI A4 cut protection
- Cool-to-the-touch comfort
- 360° breathability
- No steel or fiberglass

TUNGSTEN // 18-GAUGE:

MODELS: 7071, 7072

High cut. No compromise.

When the impossible is asked (high cut levels without the bulk), this incredibly lightweight and flexible yarn is the answer.

- ANSI A7 cut protection
- Form fitting comfort
- High dexterity
- High durability

ARAMID // 13 & 18-GAUGE:

MODELS: 7042, 7070

Cut and heat resistance.

Meets EN407 level 1 contact heat resistance for safety when working around and with hot surfaces. Plus cut and abrasion resistance.

HPPE // 13 & 18-GAUGE:

MODELS: 7021, 7022, 7024, 7025, 7031, 7044, 922CR

Durable cut protection and comfort.

High Performance Polyethylene Fibers are comfortable but highly resistant to abrasion and used for a wide range of cut protection levels.

NYLON-SPANDEX //

15 & 18-GAUGE: MODELS: 7000, 7001

Lightweight and flexible form fit.

Soft, comfortable and form fitting for precision handling and true feel.

WSX™ (W)ET (S)URFACE E(X)TREME:

MODELS: 7021, 7041, 7141

// AIRFLOW
// OIL/SOLVENTS
// SWEAT
// ANTI-SLIP COATING
// WATER-BASED PU + NITRILE
// GLOVE SHELL

WHAT IT DOES:

Exceptional grip on wet surfaces, enhanced abrasion resistance and high breathability.

HOW IT WORKS:

Textured outer layer lets oil through, creating more surface contact for increased grip.

Middle layer absorbs oil, preventing oil from passing through the glove knit; increases abrasion resistance.

DSX™ (D)RY (S)URFACE E(X)TREME:

MODELS: 7001, 7022

// AIRFLOW
// SWEAT
// TOP LAYER DIP
// 2ND LAYER DIP
// GLOVE SHELL

WHAT IT DOES:

Exceptional grip on dry surfaces, enhanced abrasion resistance and high breathability.

HOW IT WORKS:

Smooth outer layer creates more surface contact for increased grip.

Middle layer increases abrasion resistance.

ASX™ (A)LL (S)URFACE E(X)TREME:

MODELS: 7072

// AIRFLOW
// OIL/SOLVENTS
// SWEAT
// ANTI-SLIP COATING
// SMOOTH NITRILE
// GLOVE SHELL

WHAT IT DOES:

Best grip on wet and dry surfaces, highest level of abrasion resistance and breathability.

HOW IT WORKS:

Smoother outer layer lets oil through, creating more surface contact for increased grip.

Middle layer absorbs oil, preventing oil from passing through the glove knit; increases abrasion resistance.

GRIP TECHNOLOGY

WET OR DRY?

Many dips balance both, but wet- or dry-specific tech can be the difference maker for those needing to optimize for the task at hand... literally.

SANDY NITRILE:

MODELS: 7042, 7070, 7031, 922CR

Strong grip on wet/oily and dry surfaces.
High abrasion resistance; flexible for dexterity and minimal hand fatigue.

MICROFOAM NITRILE:

MODELS: 7000

All purpose handling on slightly oily and dry surfaces.
Thin coating allows for high dexterity, breathability and feel.

POLYURETHANE (PU):

MODELS: 7024, 7025, 7030, 7044, 7071

All purpose handling on slightly oily and dry surfaces.
Strong but flexible coating; versatility and value.

PROFLEX® COATED GLOVES:

TECHNOLOGY CUT MAY BE KING, BUT...

IT'S NOT THE ONLY THING. MISGUIDED GLOVE CHOICES MAY ACCOUNT FOR 30% OF ALL HAND INJURIES, BUT THEY'RE NOT ALL CUTS, SLASHES OR LACERATIONS. FINDING THE RIGHT GLOVES IS A BALANCING ACT OF ADDITIONAL CONSIDERATIONS.

BUILDING THE RIGHT GLOVE

Get a grip on your primary hazard first then consider everything else the workday throws your way.

PERSONAL PREFERENCE:

Fit, comfort and compatibility with the task at hand is priority one

Find your sweet spot of comfort, protection and performance with the right match of ProFlex® knits, dips and grips.

ADDITIONAL HAZARDS:

Cold environments, hot surfaces, knuckle-busting impacts, vibration to name a few

From thermal fleece to innovative anti-vibe palms and beyond... the only thing we haven't considered is compromise.

DEVICES/TECH:

Touchscreen friendly fingers remove another reason to take work gloves off

Tech-ready tips across the entire collection keep you swiping, tapping and typing on the grind.

LABELING 101: WHAT DOES IT ALL MEAN?

EN388: 2016

All ProFlex® Gloves are tested to EN 388 which measures and scores abrasion, cut, tear and puncture risks. Additionally, enhanced cut protection gloves are tested to ISO 13977 cut resistance and dorsal-Impact Reducing Gloves are tested for impact protection. The level at which the glove passes each risk is indicated in the EN388 testing badge found on the glove cuff.

EN388 BADGE ANATOMY

EN388
X P

- Abrasion Resistance (0-4)
- Blade Cut Resistance (0-5)
- Tear Resistance (0-4)
- Puncture Resistance (0-4)
- ISO Cut Resistance (A-I; X = Not tested)
- Impact Protection (P = PASS)

ANSI/ISEA 105

All ProFlex® Gloves are also tested to ANSI/ISEA 105. This standard measures and scores cut, abrasion and puncture resistance. As with EN388, the level at which the glove passes each risk is indicated in the ANSI/ISEA 105 badge found on the glove cuff.

ANSI/ISEA 105 BADGE ANATOMY

ANSI/ISEA 105

- Cut Resistance
- Puncture Resistance
- Abrasion Resistance

PROFLEX® COATED GLOVES:

TESTING

HOW PROFLEX MAKES THE GRADE

LEVEL 5, CUT C, A3, OILY GRIP... BEFORE WE MAKE THE CLAIM, WE GOTTA MAKE THE GRADE.
EVERY PROFLEX PAIR PASSES RIGOROUS TESTING SO YOU KNOW THEY'LL ALWAYS PASS YOURS.

[CUT TESTING]

ANSI/ISEA 105 & EN 388 specify certain tests measuring the force it takes for a blade to cut through a material.

ANSI/ISEA 105 TESTING

ANSI/ISEA 105

**F2992
TDM TEST**

TEST USED: ASTM F2292-15

WHAT TEST DOES: A machine known as a tomodynamometer, or TDM, pulls a blade in 20mm paths across a glove's surface under varied gram loads and measures the weight needed to cut through.

The sample is cut five times with three different loads and an average is calculated, resulting in a cut score of A1-A9.

EN 388 TESTING

**EN388: 2016
COUPE TEST**

**F2992
TDM TEST**

TEST(S) USED: COUPE; ISO 13997

WHAT TEST DOES: Coupe: Test material is placed beneath a rotating blade under a fixed weight, resulting in a cut score 1-5. Because the blade of coupe test will dull if it is on highly cut-resistant material, this led to the introduction of the TDM-100 machine to the European standard, too.

ISO 13997: Using the same TDM-100 machine from ANSI testing, ISO 13997 is used to give more accurate scores for higher cut-resistant materials. The Coupe Test is still used for lower cut-resistant materials, but if the Coupe Test results in a level 3-5, the ISO 13997 test is required. The ISO test will result in a score measured in newtons from A-F.

[GRIP TESTING]

Grip performance is tested in a lab where the tester pulls straight down on a piece of metal coated in oil. The score is the force registered when the hand slips. Each individual tests each dip technology, and then scores are averaged after multiple testers.

SIMPLY THE BEST

ASX™ and WSX™ Technologies put the clamp down on the competition

ANTI-VIBRATION CATEGORY OVERVIEW

When your equipment kicks like a mule, kick back. Besides meeting ANSI S2.73/ISO 10819 standards, ProFlex® Anti-Vibration Gloves employ AVC™ (Advanced Vibration Control) technology in both full palms and key areas for maximum hand protection against vibration, shock and palm impact. They just might be the best thing to happen to bad vibrations since Sid Vicious punched his ticket to punk rock purgatory.
