

# Paramedical Tattoo Referrals – 3D Areola & Scar Restoration

## About Nikki Fay Dermal Arts

Nikki Fay Dermal Arts provides specialized paramedical tattoo services as a non-surgical restorative option for patients following breast surgery, reconstruction, or medical treatment. Services are offered only after appropriate healing and are intended to complement—not replace—medical care.

## Services Offered

- 3D areola restoration following mastectomy or reconstruction
- Nipple tinting after surgical healing
- Scar camouflage on stable, healed surgical scars
- Non-anatomical, illustrative tattoo options for patients who prefer a symbolic alternative

## When to Refer

Patients may be appropriate for referral when surgical sites are fully healed and stable, reconstruction or treatment is complete, and the patient is seeking a non-surgical restorative option. All patients are screened through an intake and consultation process prior to treatment approval.

## Care Approach

- Trauma-informed, patient-led care
- Private, one-on-one studio environment
- Respect for medical treatment plans and healing timelines
- Clear communication and informed consent

## Billing & Documentation

Services are out-of-network. Paramedical tattooing is a non-medical, non-surgical service. Billing documentation may be provided for patient submission when applicable. Reimbursement varies by plan and is not guaranteed.

## How to Refer

Patients may self-initiate consultation, or referrals may be coordinated with patient consent.

Professional Inquiries: Use the provider referral form on the website.

Paramedical tattooing does not diagnose, treat, or replace medical care. Services are provided only on healed tissue and are assessed on a case-by-case basis.
