

TRADINGVIEW INDICATOR CHECKLIST

A quick-reference checklist for the core indicators used in the Velocity trading workflow.

1. VWAP

Trend and intraday location. Ask whether price is above, below, reclaiming, or rejecting VWAP.

2. VOLUME

Participation and confirmation. Strong moves should generally have meaningful volume.

3. RSI

Momentum context. Use it as supporting information rather than a standalone buy or sell signal.

4. MACD

Trend and momentum context. Use it to support, not replace, price action analysis.

5. KEY LEVELS

Support, resistance, premarket levels, and prior-day levels remain primary decision points.

6. RULE

Every indicator should answer a specific question. If it does not improve the decision, it does not need to be on the chart.

QUICK CHECK

CHECK	READY
VWAP	[]
VOLUME	[]
RSI	[]
MACD	[]
KEY LEVELS	[]
RULE	[]

DISCIPLINE RULE

Keep the workspace consistent. Change settings only when there is a defined reason to improve the process, and always test changes before relying on them in live trading.
