Earth Building Workshop

Millstone Heritage Training CIC.

Would your students love to get their hands dirty and play with mud? Do they want to learn all about how earth can be a vital building tool?

With our specialised half and full day workshops, we will teach your class all about earth building techniques, whilst also encouraging a hands on approach that involves mud, straw and timber.

We cater to all ages 4 and up and also offer more long term projects, such as building a small earth structure to be left at your school, or giving you the skills to do the same!

To book or discuss options with us, please
