Earth Building Workshop

Millstone Heritage Training CIC.

Would your students love to get hands on experience with earth construction? Do they want to learn all about different heritage and earth building techniques?

With our specialised half and full day workshops, we will teach your students all about how earth was, and can be again a vital building tool, whilst also encouraging a hands on approach that involves mud, straw and timber.

We cater to all ages and also offer on-site experience days! We are often working on heritage buildings and churches, and would love to share our passion with your students.

To book or discuss options with us, please
