

HArmonyCa® is a Dual Action Rejuvenating Technology (DART™) that combines calcium hydroxyapatite (CaHA) and hyaluronic acid (HA) in a single injectable treatment. It may be used to treat the cheeks, malar region, lateral face, and jawline. Results are typically most noticeable after approximately 1 month and may last 12 months or longer.

Patient Acknowledgement

- I confirm that I am at least 18 years of age, am not pregnant, and am not currently breast-feeding.
- I confirm that I do not have any known allergy or drug sensitivity to lidocaine, hyaluronic acid, or calcium hydroxyapatite.
- I confirm that I am not currently experiencing a skin infection, condition, or disease near the treatment area, including active cold sores, herpes simplex, or shingles.
- I confirm that I do not have a known bleeding disorder. I will notify the injector if I am taking anti-inflammatory medications (e.g. aspirin, naproxen, ibuprofen, Celebrex®), ACE inhibitors, or blood thinners/anticoagulants (e.g. Xarelto®, Eliquis®, Pradaxa®, Warfarin®).
- I will notify the injector if I have an autoimmune disease, vascular disease, wound healing problems, sensitivity to steroids, or a significant psychological condition (e.g. Body Dysmorphic Disorder).

Aftercare Instructions

- I understand and agree to follow the recommended aftercare instructions, including:
 - No makeup for 12 hours after treatment.
 - No significant sun exposure, tanning beds, or extreme weather exposure for 24 hours.
 - No strenuous physical activity for 24 hours.
 - No ultrasound-based treatments, laser procedures, or chemical peels for 4 weeks.
 - Ice packs should be used to bring down swelling and bruising.
 - If nodules or lumps develop, I will massage the area as directed and seek reassessment ASAP if they do not resolve.

Risks and Potential Complications

- I understand that common side effects may include redness (erythema), swelling (edema), tenderness, pain, bruising, and itching. These effects are usually temporary and commonly resolve within 48 hours.
- I understand that uncommon but more serious complications may include infection, keloid formation, hyperpigmentation, hypertrophic scarring, inflammatory reactions, nodules, granulomas, or hematoma formation, which may require additional medical treatment or surgical correction.
- I understand that, as with all dermal fillers, HArmonyCa® must never be injected into a blood vessel. Although extremely rare, accidental vascular injection can result in severe complications including *skin breakdown/tissue necrosis, blindness, or stroke*.
- I understand that, unlike traditional hyaluronic acid fillers, there is no reversal agent for the calcium hydroxyapatite component of HArmonyCa® (i.e. hyaluronidase will not dissolve CaHA).

Fees and Financial Policy

I understand the treatment pricing as follows:

- C Pattern: \$1,950 (2 syringes at \$975 each)
- C+ Pattern: \$2,775 (3 syringes at \$925 each)

I understand that GST (5%) will be added to the procedure cost.

I understand that payments made by credit or debit card are subject to a 2.65% Square® processing fee. Cash payments are not subject to this fee.

I understand that the practice of medicine is not an exact science and that no guarantees can be made regarding cosmetic or medical outcomes. **No refunds or complimentary reinjections will be provided regardless of outcome.**

Photography Consent

I consent to clinical photographs being taken before and after treatment for medical documentation purposes within the electronic medical record. These images will not be used externally without separate consent.
