

React and Node.js Developer/ Architect

Developer Experience: > 5 years

Architect Experience: > 10 years

Mandatory Key Skills

Node.js, react.js, AWS, lambdas, API, Mongo DB

Preferred Skills

Graph.QL

Job Description

Seeking an expert Senior Developer that can architect and develop large scale enterprise applications using React.js for front-end, Node.js for API's & Mongo DB for backend.

Key Responsibilities

- Understand proposed features and quickly design and build scalable API's and SQL schema & queries
- Develop reusable user interface components and front-end libraries in React.js
- Proactively analyse website performance and implement solutions for improvement
- Collaborate with architects, developers, business analysts, and QA analysts to design, develop, and test cloud based complex web applications with component based development on the client side
- Code secure Rest API's in Node.js, JSON, XML
- Experience working with Mongo DB designing Non-SQL schemas
- Developing in React.js and Redux. Prior experience coding in JavaScript, HTML, CSS
- Integrating systems using Rest APIs and single sign-on
- Must have experience with automated unit, integration and end-to-end testing
- Experience with continuous integration / continuous deployment using AWS Code Pipeline and CloudFormation templates
- Experience with AWS infrastructure (API Gateway, S3, Lambda, Aurora, EC2)
- Experience with Analytics integration
- Deep knowledge to create standards-compliant, cross-browser, mobile compatible front-end code with responsive design
- Deep knowledge of server-side and front-end performance optimization
- Must have excellent written and verbal communication skills
- Should manage own time and work well both independently and as part of a team
- Experience in developing data frameworks with Graph.QL would be a added advantage
