

Car Wrap Film Protector

For Protecting Vehicle Wrap Films

VION®

- Protects against dirt, bird droppings, mildly corrosive substances, etc.
- Gives the film a repellent layer
- For use on gloss film

Every proud car owner not only wants their vehicle to look its absolute best, but they want to keep it looking that way. It's a crying shame when a bonnet, roof or boot lid gets marked by acid rain, windborne sand or bird droppings! We all know that bird droppings are the biggest enemy of car paintwork...and car wrap film.

Bonnets and roofs: vulnerable

Film manufacturers give little or no guarantee for horizontal applications. Bonnets, roofs and boot lids are prime candidates, being constantly exposed to the menaces mentioned above.

Film wrapped bonnets, roofs and boot lids are susceptible to all kinds of outside influences, bird droppings being the absolute number one. Stop this menace from eating into the film by treating it with Car Wrap Film Protector before handing the vehicle back to the customer.

Car Wrap Film Protector offers the solution.

This high quality polish gives the film a durable protective layer which lasts at least 6 months with the added bonus of enhancing the film colour. Just pour a small amount on to a soft cloth, apply to the film and then polish with a cotton cloth. That's it! Another satisfied customer!

Suitable for:

- Car wrap film
- Computer cut film
- Laminated digital print film
- Retro reflecting film
- Solar window film
- Safety film
- Paint protection film
- Car paints
