

## Conflict Minerals Policy

DFX Technology Ltd is an **ISO 9001 and ISO 14001** registered company, and is fully committed to offering our customers innovative products and to minimising our impact on the environment through environmentally sound business practices.

We will work in conjunction with our staff and supply chain to ensure the highest quality of product and service are consistently attained.

This Conflict Minerals Policy has been developed in response to customer questions regarding supply chain reporting requirements on publicly traded companies to promote transparency and consumer awareness regarding the use of “conflict minerals” (specifically the metals tantalum, tin, tungsten and gold) in their products.

Although reporting requirements only apply to publicly traded companies required to report to the SEC, any company supplying products to an affected company is expected to be asked for conflict minerals information.

To assist our customers in their due diligence responsibilities, we can confirm that we have contacted our supply chain in relation to presence of conflict materials and have received assurances that there is no indication that any products manufactured by DFX Technology Ltd contain conflict minerals.
