

Environmental Policy

Aim: It is the policy of DFX Technology Ltd to offer environmentally innovative products and to improve our environmental performance through sound business practices.

DFx Technology Ltd is based in Witney, Oxfordshire. DFX designs, manufactures and supplies electronic, energy saving products. We have an established reputation for quality, design and technical support and a proven commitment to developing energy efficient products.

DFX Technology Ltd aims for greater eco-efficiency in its business practices and in support of this has documented and implemented an environmental management system (EMS) meeting requirements of ISO 14001. We take seriously our commitment to our customers and our social responsibilities with the respect to the impact our actions have on the environment. To support this we have implemented an Environmental Management System that focuses us on protection of the environment. We seek to accomplish this by minimising our significant environmental aspects and reducing any risk of pollution that might arise from processes, activities and infrastructure of our business. This is achieved with the involvement and commitment of staff across the business and considers the lifecycle of our product.

Our environmental management system:

- Supports compliance with legal and other relevant requirements applicable to our business and our products.
- Recognises and controls important aspects associated with our activities such as:
 - Reducing energy consumption and resource use related to manufacturing and site activities.
 - Minimising any potential for air emissions.
 - Raising awareness of transport related issues such as emissions and depletion of natural resources.
 - Minimising waste to landfill through the application of the waste hierarchy i.e. Eliminate, Reduce, Reuse, Recycle.

- Identifies opportunities for improved environmental performance of our product through technical innovation and process effectiveness.
- Product planning and designing for longer product life and easier recycling. (Lifecycle perspective). Providing technically competent total solutions to satisfy customer and market needs with particular emphasis on sustainability.
- Focuses our activities on continual improvement of our environmental management system, performance and protection of the environment, considering a lifecycle perspective.

In its business operation DFX Technology Ltd is committed to improvement of environmental performance and we will work in conjunction with our staff, supply chain and interested parties to set environmental objectives which are regularly reviewed to ensure the requirements of this policy are fully implemented and maintained.
