

## **NSJ Gold Corp. (CSE: NSJ) (FSE: 9PZ) Exploration Drilling Continues at the Golden Hills Project, Arizona, USA**

Vancouver, BC, April 16, 2021, NSJ Gold Corp. (CSE: NSJ) (FSE: 9PZ) (“NSJ” or the “Company”) announces that drilling at Golden Hills, located 40 km south of Parker, Arizona, USA, is in progress and has completed 5 reverse circulation holes. These 5 holes have all been within 100 meters of the previously discovered high-grade gold/copper vein zone. To date, no rock competence issues or voids have been encountered and there has been good recoveries for all samples taken. To date, Alford Drilling LLC has completed 408 meters of drilling at Golden Hills.

The completed holes have intercepted rock of similar alteration style to early holes within vein zone. Specular hematite, various copper oxides, and zones of silicification have been observed in some drill chips. Zones where the majority of recovered rock chips were composed of specular hematite have led the exploration team to add an analysis for iron concentration to future assaying. This initial round of drilling is expected to conclude before the end of April, after which the samples will be removed from secure storage and transported to ALS Chemex in Tucson, Arizona for analysis.

NSJ also announces that it has engaged Apaton Finance GmbH of Hannover Germany, to provide marketing services in the financial community in the German speaking region. Apaton Finance GmbH has been paid 20,000 Euros for a 4 month contract.

### **Qualified Person**
