

A kid-friendly check-in space, that feels inviting and memorable.

CLIENT -Centerpoint Fellowship Church

LOCATION -Pratville, AL

ROLE -Creative & Production Lead

SCOPE -Environmental Design, Fabrication, Installation

DATE -2023

CHALLENGE

Centerpoint Fellowship needed a kid-friendly check-in space that felt inviting and memorable.

As it was, the space offered little in terms of visual engagement for families arriving with young children.

GOAL

Design and produce a playful, welcoming environment around the primary entrance into the kid's area.

Reflect the energy and creativity of the children's ministry

Be durable and functional for a high-traffic area

Seamlessly integrate branding and wayfinding

PROCESS

Starting with the architectural layout, I created digital mockups to visualize how the space could transform into an imaginative playground-like scene.

- Stylized trees, clouds, and leaves to add vertical movement
- A playful tire swing and birdhouse for whimsical detail
- "Centerpoint Kids" logo integrated directly into the environment
- 3D shapes and layered elements for added depth and tactile interest

MATERIALS

I worked closely with the production team to translate digital concepts into scalable, installable pieces using lightweight, durable materials.

- 1/4" Sanded Plywood
- Foam PVC
- Aluminum Composite Panel
- Rope
- Corrugated Plastic

EQUIPMENT

- HP FB500 Flatbed Printer
- HP Latex 360 Printer
- CNC Router
- Power Tools

SOLUTION

The finished installation completely transformed the space into a vibrant and immersive environment.

By adding bold features and organic textures the new space invites kids in and sets the tone for their experience from the moment they walk in.
